A final year Information Systems and Technology student who likes building complete projects through hands-on experimentation, then refining them until they work the way I intended. I've developed and deployed full-stack web applications, including tools that are live and accessible. Looking for an internship where I can apply what I've built to real operational problems and pick up new tools along the way.

Education Level

Universitas Negeri Jakarta - Jakarta, Indonesia Sep 2023 - 2027

Undergraduate Information System and Technology, 3.62/4.00

- **Coursework:** Software Engineering, Human-Computer Interaction, Web Programming, Information Systems and Technology Project Management, Data Structures and Algorithms, Data and Analytics, Applied Statistics, Machine Learning.

Skills

- **Languages:** JavaScript, TypeScript, PHP, Python, SQL, HTML, CSS
- **Frameworks & Libraries:** Next.js, React, Laravel, Inertia.js, Tailwind CSS
- **Database & Backend:** Supabase (PostgreSQL), MySQL, Row Level Security (RLS)
- **Data & Machine Learning:** Python (Scikit-learn), Streamlit, Data Visualization
- **Tools:** Git, GitHub, Google Colab, Microsoft Office (Word, Excel, PowerPoint)

Projects

[Bookish](#) - Bookstore Catalog & Company Website

Laravel (PHP), React, Inertia.js, MySQL, Tailwind CSS

- Engineered a full-stack bookstore platform connecting a Laravel backend to a React frontend via Inertia.js, merging store inventory data from MySQL with data pulled from the Open Library API.
- Solved the gap between local development and production by manually deploying the compiled build to a live PHP host, taking the project from localhost to a working public site.

[Email Secure+](#) - Phishing Email Detection Web App

Python, Scikit-learn, Streamlit, Pandas, Google Gemini API

- Trained a Logistic Regression model on a labeled email dataset to detect phishing attempts, reaching 87%+ classification accuracy, then shipped it as a live web app.
- Strengthened detection accuracy beyond text alone by adding real-time DNS lookups (SPF/DMARC) to verify sender domain legitimacy, combining both signals into one risk score.
- Integrated the Google Gemini API to turn raw model output into explanations.

[Libraria](#) - Digital Library System

Next.js, TypeScript, Tailwind CSS, Supabase (PostgreSQL)

- Built a full-stack library system handling user authentication, authenticated book borrowing, returns, and per-user borrow history, backed by a PostgreSQL database.
- Locked down data access at the database level by Row Level Security policies, so users can only view and modify their own records, not relying on frontend checks alone.

[Digital Wedding Invitation](#) - Digital Invitation & RSVP Web App

Next.js, TypeScript, Tailwind CSS, Supabase (PostgreSQL)

- Took client's requirements from first conversation to a live, deployed website, handling design, build, and delivery independently.
- Built real-time RSVP and guest messaging with Supabase so the client could see responses instantly.

Organization Experiences

Persekutuan Mahasiswa Kristen (PMK) UNJ - Jakarta, Indonesia Feb 2025 - Jan 2026

Public Relations and Library

- Coordinated communication between the organization, university bodies, and external partners, reaching over 1,000 student members across multiple channels.
- Managed the organization's library and information resources, keeping records organized and accessible for members.

Society of Renewable Energy (SRE) UNJ - Jakarta, Indonesia Oct 2024 - Sep 2025

Media & Marketing

- Created educational social media content on sustainability and renewable energy, growing the audience by 150+ followers.
- Planned and executed digital marketing campaigns to promote events and increase community engagement around green energy initiatives.

Certificates

- [Python Basics](#) - Dicoding (2025)
- [EF SET English Certificate 68/100 \(C1 Advanced\)](#) - EF SET (2025)
- [Intro to Software Engineering](#) - Revou (2024)
